# FERRARI CORPORATE OBJECTIVES

*Being part of Ferrari means being part of a unique team where people are the most important asset: the common values that compose the Ferrari Essence.*

Objective 3: Provide support for integrating machine learning tasks in the architecture. It turns out that this is the most principled and, in the long run, the only realistic approach for keeping up with exponentially growing information at the sensors. To show the potential of the approach, FERARI has selected two scenarios in challenging, high-impact areas of industry, where communication bottlenecks currently are severe limiting factors. Objective 5: Exemplify the potential of the new architecture in the telecommunication and the cloud domain. It is the only approach that can avoid unnecessary data shuffling between nodes. We are committed to the pursuit of excellence on a daily basis. Passion and Excellence We are driven by our passion for both the road and the track. Integrity We are conscious of being part of a world-renowned company and are thus committed to adhering to the core values of respect, honesty, loyalty and consistency. Objective 4: Provide support for flexible and adaptive analytics workflows. The goal is to use the added control flow capabilities objective 1 to support such learning algorithms. Providing a seamless model that applies CEP as part of Big Data application in a way easily consumable by a business will position CEP a great step towards bridging this gap. About us. The challenges that arise each day remind us we are part of a unique and truly extraordinary company that inspires huge emotions in all of us. Ferrari DNA Unique Being Ferrari means being part of a unique future-focused team in which people are the most valuable resource. We strive to guarantee a sustainable future. These scenarios are 1 the analysis of mobile phone fraud in telecommunication networks and 2 real-time health monitoring in clouds and large data centers as a scenario where already today high volume of data is severely limiting the optimization and monitoring of IT systems. Current data flows are difficult to set up and to maintain. Our values Individual and team People are our greatest resource but even they can only achieve truly great results through working as a team in a company that prioritises merit, competency and professional growth. Open Software Repository and Distributed Online Learning Framework Objectives FERARI will implement its overall vision for building large scale distributed systems by decomposing it into a number of specific objectives: Objective 1: Provide support for large scale services by making the sensor layer a first class citizen in Big Data architectures. Tradition and Innovation We represent a company in which tradition and innovation are melded each and every day to fuel the Ferrari legend. Only if this can be achieved it will live up to its economic promises.
